Leader Technologies' Instructions for Using the PowerREGISTER Application

Registering Via the PowerREGISTER Product Registration Application

1. During product installation, an application will appear asking you to enter some specific demographic information such as your date of birth, name, address, country, e-mail address and information to help us better serve you.
2. If you are registering a product designed for children and you are under the age of 13, you will **NOT** be allowed to register. You will need to have a parent or guardian complete the registration form for you.
3. On the first screen of the registration application, there may be a 'Register Online' button that you can click on and a web browser will be launched to connect you to an online registration site.
4. If the option to register online is not present, click the 'Register' button and you will be moved through a set of questions.
5. All fields with an asterisk or otherwise marked with a special font color or style are required and must be completed in order to register your product.
6. On the final screen of the registration application, there will be a variety of choices for submitting your information.
 - a. If you are connected to the Internet, select the Internet method.
 - b. If you are not connected to the Internet at this time, you may select 'E-mail', which will allow you to register your product via your e-mail program the next time you send e-mail.
 - c. If you are unable to connect to the Internet or unable to register with one of the above methods, you may select 'Modem' which will allow you to register via your computer's modem. The modem registration is via a toll free 800 number in the United States and Canada and via a direct dial number outside of the United States and Canada.
 - d. If the above methods do not work, or you are registering for someone under the age of 13 you may have to use the Fax or Mail options. Selecting one of these options will print out your registration information to be faxed or mailed to complete the registration of your product.
